

BA Monitor

Professional Network Monitoring System — Annual License Proposal

Real-time monitoring · Instant alerts · SLA reports

i About the System

BA Monitor is a complete platform for real-time, 24/7 monitoring of enterprise networks — it tracks routers, switches, access points, and fiber-optic links, and alerts you the moment any fault occurs, before your users even notice. Built to run entirely inside your network (on-premise) with full security and no cloud dependency, through a fast, easy Arabic/English interface.

Launch Offer: Free **5-day full-featured trial** of BA Monitor, plus a **free live demo session** — try it on your own network before you commit. See the live demo at **code-bundle.com**.

1 Key Features

- ✓ Real-time device monitoring (Ping) with instant fault & flapping detection
- ✓ MikroTik router monitoring: CPU, RAM, PPP, traffic
- ✓ Cisco switch monitoring via SNMP
- ✓ Fiber-optic (SFP) health with early degradation alerts
- ✓ Interactive drag-and-connect network map
- ✓ Professional EVE-NG-style management topology
- ✓ Built-in in-browser SSH/Telnet terminal
- ✓ Instant alerts via Telegram & Web Push
- ✓ Daily SLA reports and uptime tracking
- ✓ Router log and detailed traffic monitoring
- ✓ Automatic device configuration backup
- ✓ Satellite, 3D, and live geographic map views
- ✓ User roles (admin / viewer)
- ✓ Runs fully inside your network — privacy & security

2 Annual License Plans

PLAN	DEVICES	ANNUAL SUBSCRIPTION	SUPPORT
Standard	Up to 250 devices	\$6,000 / year	Standard support
Professional Most Popular	Up to 1,000 devices	\$12,000 / year	Advanced support
Enterprise	Unlimited	\$20,000 / year	Priority support + SLA

Every plan starts with the **free 5-day trial**. All plans include: regular updates, bug fixes, and technical support for the full subscription period — plus full remote installation, device onboarding, alert configuration, and team training. Special discount for multi-year contracts. Prices in USD, payable in local currency.

3 Services & Assistance Provided

- ◆ Full remote installation and setup
- ◆ Connecting all your network devices and configuring monitoring
- ◆ Training your team to use the system
- ◆ Configuring alerts (Telegram / Push) to your needs
- ◆ Continuous technical support throughout the subscription
- ◆ Regular updates and new features
- ◆ Assistance with network & VPN setup when needed
- ◆ Consulting to improve network stability

4 Optional Add-ons on Request

- ◆ Increased number of monitored devices
- ◆ Custom reports to your requirements
- ◆ Integration with external systems (alerts / dashboards)
- ◆ Monitoring of additional device types
- ◆ White-label branding under your organization
- ◆ Priority support with a Service Level Agreement (SLA)
- ◆ Custom NOC display dashboards
- ◆ Flexible deployment (on-premise / private cloud)

Ready to Serve You
